

KAPIL

Software Engineer

8607266983 | Kpdaksh2000@gmail.com | Gurugram, Haryana, India | linkedin.com/in/mrdaksh786

PROFESSIONAL SUMMARY

Software engineer with 2.7+ years shipping production web applications across the MERN stack, with full ownership from requirements through deployment and performance optimization. Architected real-time systems using Kafka, Redpanda, and Socket.io, published secure payment SDKs adopted across e-commerce integrations, and built complex visual workflow builders from the ground up. Strong cross-functional collaborator across design, backend, QA, and product teams. Applies AI/LLM integration (RAG, LangChain, vector embeddings) to bring intelligent features into full-stack applications.

TECHNICAL SKILLS

Frontend: TypeScript, React.js, React Native, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, RESTful API Design, FastAPI

Databases: MongoDB, PostgreSQL, Redis

Infrastructure & Messaging: Docker, Kafka, Redpanda, Socket.io, Azure Blob Storage, Prisma ORM

Tools & Practices: Git & GitHub, Code Reviews, Cross-Browser Compatibility, Performance Optimization, Agile/Cross-Functional Collaboration

AI/ML: Local LLM Integration, FastAPI, LangChain, Retrieval-Augmented Generation (RAG), Vector Embeddings

PROFESSIONAL EXPERIENCE

Easyrewardz Software Services | Frontend Developer Feb 2025 – Present

Gurugram, Haryana, India

- Architected and delivered production systems end-to-end — from a real-time notification platform (Node.js, Socket.io, Kafka, Redpanda) to a full-stack bot-orchestration tool spanning React, Express, PostgreSQL, Prisma, and Redis — owning each system from design through deployment.
- Secured backend services with signature-based authentication, input validation, and role-based access control, reducing invalid API requests by 95% while integrating MySQL, MongoDB, and Azure Blob Storage across multiple production systems.
- Designed complex frontend architectures from scratch, including a JSON-driven visual workflow builder and a Redux-powered data visualization platform, establishing component hierarchies and shared utilities reused across the engineering team.
- Published and maintained developer-facing SDK packages on npm implementing encrypted, PCI-compliant payment flows — extending engineering ownership beyond internal features to externally consumed, security-critical software.
- Translated ambiguous business and user requirements into scoped technical specifications across design, backend, QA, and product stakeholders, balancing feature velocity with long-term maintainability.

Tata Consultancy Services | Graduate Trainee → Programmer Nov 2023 – Feb 2025

Trivandrum, Kerala → Gurugram, Haryana, India

- Completed structured training across coding, networking, and systems fundamentals before transitioning into a Programmer role delivering client-facing features.
- Delivered solutions across diverse client projects by translating business requirements into reliable, scalable code, collaborating with engineering, QA, and project stakeholders to remove blockers and align on outcomes.
- Replaced manual testing of VCR conference room systems with an automated, AI-assisted scripting process, significantly reducing testing time and operational burden while improving service reliability.
- Proactively identified technical and UX challenges and proposed solutions that improved feature usability and reliability.

ACHIEVEMENTS

Group Representative — TCS Graduate Trainee Program, Trivandrum

Selected as one of two Group Representatives for a training batch of 70 trainees; served as the primary point of contact for technical and non-technical queries, guiding peers through onboarding, training modules, and assessments.

PROJECTS

ZenceBotBuilder — Bot Flow Designer (Full-Stack)

TypeScript · React · Node.js · Express · PostgreSQL · Prisma ORM · Redis · Azure Blob Storage

Led full-stack development of a visual bot-flow builder from initial architecture — scaffolding the React frontend and Node.js/Express backend, defining GraphQL-like JSON schemas to represent live bot flows, and rendering interactive designer components with Framer Motion. Built server-side APIs with role-based access control, Prisma ORM on PostgreSQL, Redis caching, and Azure Blob Storage for media uploads; published and maintained both client and server packages on npm.

Atlantis — Data Visualization Platform (Frontend)

React · TypeScript · Redux · Redux Thunk

Built a frontend-only data visualization platform for representing large, complex datasets in rich visual form — positioned as a lighter-weight alternative to tools like Tableau or Power BI — using Redux and Redux Thunk to manage complex application state and asynchronous data flows.

StorePay SDK — Secure Payment Integration (Frontend)

JavaScript · React · Embedded iFrame Encryption · Real-Time Status Updates

Architected and published secure payment SDKs (Vanilla JS & React) on npm, implementing an end-to-end encrypted checkout flow inside an embedded iFrame with real-time transaction status updates, enabling merchants to accept payments without page redirects while maintaining PCI-compliant communication with the payment gateway.

Burger King Chatbot Module (React Native)

React Native

Owned end-to-end development of a complete React Native chatbot module for a Burger King mobile experience, from UI implementation through integration within the existing app architecture.

EDUCATION

Master of Technology (M.Tech) — Computer Science Aug 2024 – Jul 2026

Vaish College of Engineering, Rohtak (affiliated with MDU Rohtak) — Thesis: Multimodal Sentiment Analysis using Deep Learning

Master of Computer Applications (MCA) — Computer Science Aug 2022 – Aug 2024

Chandigarh University
